- **Quick, simple, reliable jaw registration techniques**
- **Advantages of employing various laboratory and clinical techniques**
- **Using a “Smile Design”**
- **Tools to facilitate the new esthetic denture**
- **Denture processing with minimal dimensional changes**

Please see reverse for details and Registration Information

Presented by

May Dental Arts, in association with

Jay Sober, Field Technical Specialist with Ivoclar Vivadent

Eliminate the frustration, intimidation, and unpredictability often associated with removable restorations. Join the revolution of ideas, techniques, and materials that can immediately improve the quality, enjoyment, productivity, and profitability of removable prosthetic services in your practice.

This course will update basic removable procedures, clinical concepts, and materials, as well as introduce more advanced techniques. Emphasis will be placed on edentulous anatomy, simplified impression procedures for complete and partial dentures, posterior denture occlusion, and the development of skills of communication between the clinician and the lab technician. Learn about techniques which can greatly improve the predictability of the final prosthesis. See how denture processing systems differ and how important they can be to the health of oral tissues.

Jay A. Sober has been a dental technician for twenty-eight years and a CDT since 1993. Since the early '80's he has worked with diverse labs in different capacities, including as Director of Education for a sizable organization in upstate New York. In addition, Jay has been published in several dental trade magazines and has lectured on various approaches in dental technology. As an associate with Ivoclar Vivadent, Jay serves as the Central Regional Field Technical Specialist in Removable Dentistry.
